

QUANTUM METHOD AND APPARATUS FOR QUALITY CONTROL OF ANY RADIATION, PARTICULARLY MICROWAVE RADIATION

Abstract

A method and apparatus for quality control of any radiation, both ongoing and incoming, particularly microwave radiation, and consequently for efficient prevention of its all possible hazardous effects on living bodies comprising of: creation of balanced thought patterns, recording them in a quantum multi-nanolayered material structure with retained direction of spinning of the electric current and replacing in a radiating device already existing records of the unbalanced thought patterns with the so created records of the balanced thought patterns, by uniting of the quantum multi-nanolayered material structure with a radiating device itself.

Description

BACKGROUND OF THE INVENTION

1. Field of the Invention

This invention relates generally to the field of wireless technology, especially to the field of radiating devices and, more particularly to the quality – the degree of balance - control of the (microwave) radiation thereof.

2. Background Art

This invention solves the problem of the balancing of any radiation, particularly microwave radiation, of the radiating devices and optimization of its effects on living bodies.

The very base of this invention is discovery of the true cell, atom and particle concept (Ref. 1). Namely, it was experimentally proven that cell, atom and particle consist of light rings spinning around the still zero point of universal Mind which is the source of energy and from which spinning light rings – electric current – borrow energy in order to spin.

Findings of many researchers are confirming observations made over the years of the negative effects of devices radiating particularly microwave radiation on the balance of living cells. It has been discovered that small amounts of unbalanced energy can have the same negative effects as a massive dose of chemicals. The balance of all living bodies is being found to be influenced by the subtle fields of microwave energy, what means that radiating devices are the cause of an unbalance of living cells always then they are switched on, not only when they are in use (Ref. 2).

It is proven that reduction of the exposure level by a factor of 1.000 actually increased the damage of the blood-brain barrier showing that this is not a dose-response effect and that reduction of the output power will not make wireless technology safer. Furthermore, reduction of the exposure level by a factor of 10 or 100, thereby duplicating the effect of wearing a headset, moving a cell phone further from body, or standing next to somebody else's radiating device, did not appreciably change the results. And finally, a single **two-hour** exposure to a radiating device, **just once** during its lifetime, **permanently damaged the blood-brain barrier** (Ref. 3).

Radiating devices are regulated by the Federal Communications Commission (FCC), and expressed by the measured value of so called Specific Absorption Rate (**SAR**), based upon the arbitrary assumption that *the brain can safely dissipate added heat at a rate of up to 1 degree C per hour*. The standard way to measure SAR is on a "phantom" made of Plexiglas in the shape of human head and filled with a homogenous fluid. It can in no way simulate the real situation while the structure of the human body (particularly of head and brain) is so complex and non-uniform that "hot spots" are produced, where heating can be tens or hundreds of times what it is nearby, and there are no sensory nerve endings in the brain to warn us of a rise in temperature, because we did not evolve with microwave radiation, since this never happens naturally in human environment on Earth. Lowering of the SAR value by new generations of radiating devices is the logical consequence of the reduction of the output power, *but has no correlation with safety of radiating devices, as it is wrongly interpreted*.

“Current safety guidelines for cell phones assume no harmful effects, as long as the microwave radiation they emit does not cause heating of body tissue. Exposure limits are intended to protect us only from excessive temperatures caused by absorption of energy, a known danger linked to the intensity of radiofrequency microwaves. But living cells respond in non-thermal ways to the fields produced by cell phones, and at intensities below the established safety threshold” (Ref. 4).

The radiating device producers have been repeating that there are no scientific proofs that the radiating device technology is hazardous for human beings. The Water Crystal Photography (WCP), developed by Dr. Masary Emoto (Ref. 2), is been delivering photos of the totally unbalanced crystal structures of waters irradiated by radiating devices, which are indisputable proofs that microwave radiation of radiating devices is catastrophic hazard for humans and definitively refute the statements of the radiating device producers that the radiating device technology is safe. The human cells contain in average about 75% water, whereas the cells of brain contain 85-90% water and the blood cells contain even 95% water. **Water drops are cellular when warmed above their freezing point, but below that point they become hexagonal crystals to reflect their positions in their cube wave. In other words, water crystal structure is reflection of the degree of balance of the wave field by which it is irradiated, or is the measure of its quality.** So, the WCP is the most convenient method for verification and delivering of the final true proofs of quality of the effects of a radiating device microwave radiation on living bodies.

Human beings are water-based and since the pulsing frequencies of the water molecules and the microwaves of radiating devices are very close, according to the general law of resonance based on the law of action and reaction and according to the universal principle of octave multiplication, the water will be warmed up. That is the mechanism of body heating by microwaves and that is why we are particularly sensitive to microwaves.

The main problem is that the microwave radiation of current generations of radiating devices is not centered, is off-center, as a logical consequence of the present state of science and the state of balance of the beings of producers of the radiating devices whose unavoidable final consequence are the eccentric oscillations of both emitting medium and the outgoing microwave radiation (Refs. 5, 6). ***If human thinking is unbalanced, and since his actions reflect his unbalanced thought-decisions, the tensions which result from such unbalance – the records of the unbalanced thoughts - will cause every Mind-center, which controls the balance of those thought-ring records, to act as though they were off-center and the spinning of the electric current around that eccentric center will be like a fly-wheel with its shaft eccentrically placed.*** In accordance with the general law of resonance, the resulting off-centered microwave radiation of radiating devices in interaction with living cells brings them out of balance in the measure of the equal-ness of their oscillating frequencies. That is why some parts of the living bodies are more influenced by microwave radiation than the other parts.

There are many attempts for optimization of the influence of the unbalanced microwaves of the radiating devices on living cells, either in form of electronic chips or in form of different kind of stickers. For most of them certification procedure included clinical investigations and final conclusions are made both on the

base of some measurements of body functions and on the testimony of those who were tested. But, since it is not possible in any kind of clinical investigation to eliminate the influence of mental states of tested persons caused by many possible different sources which are in no correlation with radiating device radiation, all those certifications are worthless. The best way to measure direct correlation between microwave radiation of radiating devices and living cells is to perform separate measurements on water. Why on water? There are two reasons. The first one is the fact unknown in the science that **ONLY** two substances have been creating, namely **water** and **fire**, or **hot dryness** and **cold wetness**. Water is continuously returning to fire and that process is again repeated by fire turning to water, or in other words water is frozen fire and fire is incandescent water. The second reason is the fact, also unknown in the science, that all elements of matter – all other constituents of a living cell – are also frozen flame, so they all are different states of water! So, every effect of microwave radiation measured separately on pure water is the same one that microwave radiation causes on living cells.

SUMMARY OF THE INVENTION

It is the primary object of this invention to promote a novel method and to provide an optimal apparatus for balancing of the microwave radiation of the radiating devices and consequently for enabling of optimal effects of their influence on living cells. The non centered microwave radiation of radiating devices is caused by unbalanced thoughts and their consequent records, whose final effect is an eccentric spinning of the electric current around “eccentric” Mind-centers. For the purpose of elimination of the possible harmful effects of the off-centered microwave radiation, the unbalanced thought records are replaced with balanced thought pattern records, which are an expression of Mind knowing. A quantum multi-nanolayered material structure is used as a carrier in which the balanced thoughts are first recorded and then all together – the quantum multi-nanolayered material structure and recorded balanced thought patterns, named **QUANTUM RADIATION BALANCER (QRB)**, see Fig. 1, - is brought to become part of a radiating device itself. Those records are mirror images created with mirrors erected in planes of 90 degrees to the direction of polarity, or to the gravity shaft, retaining in this way the same direction of the electric current spinning. From that moment on, because of the fact that *all is interconnected every moment of the time in this electric universe of motion*, both the radiating device and its microwave radiation become balanced as a result of so recorded balanced thought patterns which cause that every Mind-center, which controls the balance of those thought patterns, to act as centered and consequently the spinning of the electric current around the Mind centers to become the true circles (Ref. 7). Both the method of replacement and the elements of the quantum multi-nanolayer structure are adequately chosen in order to be compatible with a way of Mind knowing expression so that absolute efficient and permanent acting of Mind-centers in accordance with the recorded balanced thought patterns is provided. As a final result the balanced outgoing microwave radiation of the radiating device, in accordance with the general law of resonance, causes that all living cells irradiated by that microwaves get into balance, what is been proven by the hexagonal crystal structure of their water constituent (see Fig. 2).

The ongoing radiation balanced in this way, according to the law of resonance, will balance imbalanced incoming radiation in the vicinity of the radiating device.

BRIEF DESCRIPTION OF THE DRAWINGS

Fig. 1 represents a photo of the quantum multi-nanolayered sticker QRB

Fig. 2 represents water crystal photography of: **(a)** a water used for irradiation, **(b)** the water irradiated by a non balanced radiating device and **(c)** the water irradiated by the radiating device balanced with QRB

DETAILED DESCRIPTION OF THE INVENTION

In accordance with indisputable fact that the unbalanced thoughts are recorded in the radiating devices and expressed as unbalanced outgoing microwave fields, the only secure method to prevent its effects in form of possible unbalanced effects of living cells exposed to that radiation, is either to bring the source of unbalanced thoughts in balance or to replace their unbalanced records with consequent balanced thought pattern records. The first possibility is out of my capabilities since it is a matter of adequate conscious sovereign decisions according to the free will choice, so the second possibility is used out and applied for the realization of the aim of this invention.

The first step toward the realization of that aim is creation of an appropriate form of the balanced thought patterns as an expression of my Mind knowing, enabled to me by the level of my conscious awareness, so that Mind-centers, which control the balance of the thought patterns, act as centered and consequently the spinning of the electric current around the Mind centers, are the true circles. The second step is the choice of the structure of the material carrier so that the patterns can be in the simplest and most efficient way recorded in the chosen quantum multi-nanolayered material structure. In the third step the created balanced thought patterns are recorded in the experimentally chosen quantum multi-nanolayered structure consisting of chemical elements carefully selected according to their positions in the wave amplitude so that the created records are mirror images in reverse of the created balanced thought patterns. Namely, the records are created with mirrors placed at angles of 90 degrees from the direction of polarity, or from the gravity shaft, so that the same direction of spinning of the electric current is retained. Both the balanced thought patterns and their records in the quantum multi-nanolayered basis are so performed and prepared that an optimal replacement of the already existing records of the unbalanced thought patterns in the structure of the radiating device itself is best enabled. The fourth step is the fusion of so obtained unit – QRB – with a radiating device itself, in the way that the unbalanced thought patterns which are integrated in the radiating device structure through the procedure of their production, can be easily and efficiently replaced with the records of the created balanced thought patterns.

It is turned out that the QRB in the form of a sticker satisfies all above demands and can be brought in union with a radiating device itself by simple pasting (on the inside surface of the battery cover or on the battery itself - recommended for the sake of mechanical damage prevention during use of a radiating device).

The test procedure of the final product QRB has been carried out in three following steps:

- **First**, a water sample is taken and its crystal structure recorded by application of the WCP technique. The result is shown in Fig. 2 (a) from which it is obvious that the chosen water itself was unbalanced, since it originated from the mountain where a high content of heavy metals lead and zink has been documented.
- **Second**, an another sample of the water from the same source has been irradiated by the microwave radiation of a radiating device for the time of five minutes and its crystal structure recorded by application of the WCP technique. The result is shown in Fig. 2 (b) from which it is obvious that the degree of unbalance in this case is much higher then in the first case, as a logical consequence of the acting of the unbalanced microwaves.
- **Third**, a new sample of the water from the same source has been treated as in the second case with only difference that the QRB was pasted on the radiating device itself. The result is shown in Fig. 2 (c) from which it is obvious that, as a result of the successful replacement of the unbalanced thought records with a balanced thought records, the water has become balanced what is reflected in its crystal structure which is turned into hexagonal form, similar to a snow-flake. That is the final and indisputable proof that the method developed was working excellent and that the final

product – the sticker QRB – is not only preventing all possible hazardous effects of the microwave radiation of the radiating devices, but also is bringing already unbalanced living cells back into perfect balance.

The method developed, with small consequent adjustments, is applicable for all sources of microwave radiation. The great advantage of the QRB is the fact that it contains just components that could go out of functionality only by mechanical damages, so there are no service costs and there is unlimited guarantee period.

Claims

1. A method for quality control of any radiation, both outgoing and incoming, particularly microwave radiation, of a radiating device by creation of balanced thought patterns and their records with retained direction of the electric current spinning, and replacement with them already in a radiating device itself existent unbalanced thought pattern records, and an apparatus in form of a quantum multi-nanolayered material structure for recording of the balanced thought patterns and for uniting of the records with a radiating device itself, for the sake of balancing of both outgoing and incoming radiation.
2. The method in claim 1. wherein the balanced thought patterns are created as an expression of Mind knowing in form of the electric current spinning around the Mind centers, which control the balance of the patterns, so that the spinning is true circular.
3. The method in claim 2, wherein the records of the balanced thought patterns are created so that spinning direction of the electric current is retained.
4. The method in claim 3, wherein the balanced thought patterns are recorded for the sake of replacement with them of the records of the unbalanced thought patterns, already existent in both outgoing and incoming radiation.
5. The method in claim 4. wherein a basis for holding of the records of the balanced thought patterns with retained spinning direction of the electric current is a quantum multi-nanolayered material structure in form of a sticker.
6. The method in claim 5, wherein the sticker is circular in shape with diameter which is harmonic value of the number $\sqrt{10} \sqrt{10} = 3.16227766$.
7. The method in claim 6, wherein records of the unbalanced thought patterns already existent in both outgoing and incoming radiation are replaced with the records of the balanced thought patterns.
8. The method in claim 7, wherein the replacement of the both outgoing and incoming radiation already existent unbalanced thought records with the balanced thought records is done by simple pasting of the sticker on a radiating device.
9. A balancing apparatus, suitable for the quality control of the both outgoing and incoming (microwave) radiation, comprises the quantum multi-nanolayered material structure in form of a sticker for the purpose of its direct pasting on a radiating device itself.
10. A balancing apparatus in claim 9, wherein the quantum multi-nanolayered material structure is composed of the chemical elements chosen in accordance with their positions in the wave amplitude so that the records of the balanced thought patterns in the quantum multi-nanolayered basis are mirror images in reverse of the created balanced thought patterns.
11. A balancing apparatus in claim 10, wherein the mirror images in reverse of the balanced thought patterns are compatible with a way of Mind knowing expression so that absolute efficient and permanent acting of Mind-centers in accordance with the recorded balanced thought patterns is provided.
